ABSTRACT

This report discusses the residence and migration of college students. Students coming from other states or countries are classified as inmigrant students, and upon leaving a state as outmigrant students. Information, primarily in tabular form, is presented on (1) all students in all institutions; (2) characteristics of institutions by control and level of institution; and (3) characteristics of students in the following categories: undergraduates, first-professional students, graduate students, students by sex, and foreign students; and (4) the survey procedures. FOREWORD

At 5-year intervals, the Office of Education conducts a survey designed to measure migration of college students among the 50 States. Such a survey was conducted in the fall of 1968 as part of the Higher Education General Information Survey (HEGIS) for 1968-69. Data from that survey have already been published in the report *Residence and Migration of College Students, Fall 1968: Basic State-to-State Matrix Tables,* which presents the basic student migration data upon which this more interpretive report is based.

This quinquennial survey, in its current form, was developed by the American Association of Collegiate Registrars and Admissions Officers; their contribution, made through the Enrollment Studies Committee, continues to be invaluable.

This current study was planned by Marjorie O. Chandler and conducted by George H. Wade, both of the Higher Education Surveys Branch. Robert Calvert, Jr., while serving as consultant to the study, performed much of the background research and made substantial contributions to drafting the report.

Finally, the assistance provided by the registrars and other officers who responded for the individual institutions is acknowledged with gratitude.

Theodore H. Drews, *Chief*
Higher Education Surveys Branch

DEFINITIONS AND EXPLANATORY NOTES

Aggregate United States comprises the 50 States, the District of Columbia, and the Outlying Areas (Canal Zone, Guam, Puerto Rico, the Virgin Islands, and other U.S. areas).

Attendance status distinguishes whether a student is enrolled full or part time.

Enrollment status distinguishes among first-time students, new transfer students, and returning students in a college or university.

First-professional students are enrolled in professional schools or programs, seeking the first-professional degree in fields such as law, medicine, or dentistry that require at least 2 or more academic years of (prior) college work for entrance and a total of at least 6 academic years of study for a degree.

First-time undergraduate students are beginning freshmen not previously enrolled in any institution of higher education.

Four-year institutions include all institutions, both graduate and undergraduate, which grant bachelor's or higher degrees or some recognition equivalent to such degrees, e.g., ecclesiastical recognition in a theological institution. [They may also offer programs that require less than 4 years.]

Full-time undergraduate students are those whose academic load—coursework or other required activity—is at least 75 percent of the normal student load as defined by the institution.

Home State is the State of a student's legal residence as determined by the reporting institution. Institutions may have determined this in different ways, depending upon records available, State law, or institutional policy.

Inmigrants are those students who come into a State to attend college.

Institutional control distinguishes publicly and privately controlled.

Level of enrollment identifies students as undergraduate, first-professional, or graduate students as defined elsewhere in this listing.

Level of institution classifies institutions as universities, other 4-year institutions, or 2-year institutions, as defined elsewhere in this listing.

Migrants are students enrolled in institutions in States other than their States of home residence.

NA, or not applicable, indicates that data for that particular item are not applicable to the State designated.

Net migration is the number of inmigrants minus the number of outmigrants. A net inmigration occurs when more students migrate into the State than leave the State and the net migration is positive. A net outmigration occurs when more students leave the State than enter, and the net migration figure is negative.

New transfer students are students who transferred from one institution to another in fall 1968, with or without academic credit.

Other 4-year institutions are those which remain when "universities" are subtracted from all 4-year institutions.

Outlying Areas include the Canal Zone, Guam, Puerto Rico, the Virgin Islands, and other U.S. areas.

Outmigrants are those students who leave their home States to attend college somewhere in the aggregate United States.

Privately controlled institutions are those not under Federal, State, or local government control; they may be independent, nonprofit, proprietary (incorporated as profitmaking), or affiliated with a religious group.

Publicly controlled institutions are those under Federal, State, or local government control.

Service Schools are the United States Air Force Academy, Air Force Institute of Technology, Coast Guard Academy, Merchant Marine Academy, Military Academy, Naval Academy, and Naval Post-Graduate School. In this report their totals are grouped separately, rather than included in the States in which they are located.

State, as used here, may be interpreted for purposes of student migration to include the District of Columbia, and is also used to refer to the Outlying Areas considered as a single unit (e.g., see tables 1–40).

Students, as defined for this report, are persons enrolled at a main or branch campus and taking coursework resulting in resident credit toward a bachelor's or higher degree in that institution or by transfer to a 4-year institution. They may be regular or "special or unclassified" students; attending full or part time; or attending during day or evening. For this report, the definition excludes auditors, extension students, persons enrolled in short courses, and persons enrolled in terminal-occupational programs taking coursework not chiefly creditable toward a bachelor's degree. Also excluded are U.S. citizens studying abroad, including those in overseas branches of U.S. institutions.

Students enrolled are those enrolled in an eligible institution of higher education in a State, including those who remain in their home State to study and those who migrate in from another State or foreign country.

Students from foreign countries are persons whose permanent home residence is outside the aggregate United States.

Students remaining are the students who attend college in the State of their permanent home residence (home State).

Student residents are the residents of a State who are enrolled as students in their home State or any other part of the aggregate United States. Foreign students, of course, are not included.

Two-year institutions are collegiate community or junior colleges or comparable institutions that offer programs reaching a level of at least 2 years beyond high school.

Undergraduate students are those who have not yet earned a bachelor's degree. Only those undergraduate students taking work wholly or principally creditable toward a bachelor's degree were included in the migration analysis.

Universities are those 4-year institutions of higher education that give considerable stress to graduate education, that confer advanced degrees as well as bachelor's degrees in a variety of disciplines from the liberal arts and the sciences, and that have at least two professional schools that are not exclusively technological.

INTRODUCTION

The preponderant majority (82 percent) of all students enrolled in U.S. institutions of higher education for the fall 1968 term were studying in institutions in their home States. If foreign students studying in the United States are excluded from the statistics, the ratio increases by a percentage point to 83 percent.[1]

It is useful to note that the exclusion of foreign students enables the analyst to view the aggregate United States as a closed system; and the summation of the various net inmigrations and net outmigrations of the 50 States, the District of Columbia, and the several outlying U.S. areas produces a balance of zero. Inclusion of the 110,263 foreign students would result in a positive balance for the aggregate United States, that is, a net inmigration of 110,263. Each individual State, of course, is not a closed system because in no case does the number of residents leaving a particular State to attend college in other States exactly equal the number of students entering from other States. However, it should be pointed out that every State received some of the 110,263 foreign students, so there is always a *tendency* for each State to have a net inmigration.

The following table demonstrates the effect at the national level that foreign students have had in the three most recent migration surveys on the ratios of students remaining in their home States to attend college:

		Aggregate U.S. ratios:		
		1958	*1963*	*1968*
Number of students remaining in their home States / Total students enrolled in aggregate U.S.*	=	0.80	0.80	0.82
Number of students remaining in their home States / Total U.S. student residents†	=	0.81	0.81	0.83

* "Students enrolled" include foreign students.

† "Student residents" do *not* include foreign students. The numerator is the same for the two ratios, but exclusion of foreign students from the second denominator naturally results in a higher ratio. This diluting effect of foreign students, of course, will be evident in subsequent ratios calculated for any component enrollment figures.

An explanation of two frequently cited ratios will be helpful:

(1) Students remaining in their home State to students enrolled (including foreign students) in that particular State and,

(2) Students remaining in their home State to student residents (excluding foreign students) of that State.

The ratio of students remaining to students enrolled is determined by this formula:

$$\frac{\text{Number of students enrolled in colleges or universities located in home State}}{\text{Number of students (from all sources) enrolled in colleges or universities in that State}} = \text{Ratio of students remaining to students enrolled}$$

(Illustration: As shown in table 1, a total of 77,517 residents of Alabama remained in their home State to enroll in a home-State institution of higher education. Total enrollment in Alabama institutions, both from within and from outside the State, was 91,399. Thus residents constituted 0.85 of total enrollment in that State.)

The ratio of students remaining to student residents is determined by this formula:

$$\frac{\text{Number of students enrolled in colleges or universities located in home State}}{\text{Number of residents of that State enrolled in colleges or universities anywhere in the aggregate United States}} = \text{Ratio of students remaining to student residents}$$

(Illustration: For the State of Alabama, table 1 shows that 77,517 residents were enrolled in home-State institutions. A total of 88,905 residents of Alabama were enrolled in higher educational institutions in the aggregate United States. Thus, residents remaining in their home State constituted a ratio of 0.87 of total student residents.)

For the sake of simplification and consistency, this report will focus on "student residents" and/or their relationships with "students remaining." At times, for clarification or contrast or simply because it is more appropriate, an analysis will be based on "students enrolled."[2] Unless the term "students enrolled" is specifically designated, enrollment figures given are actually the number of "student residents." If the reader wishes to make a parallel analysis for "students enrolled," he needs only to substitute those data for "student residents"—or *vice versa*. At the national level, differences from "student residents" data will be slight, as demonstrated in the preceding tabulation; but at the State level, much wider fluctuations will be evident because not only foreign students but also students going to and from the several States cause

[1] More precisely, the difference is 1.363 percentage points —82.931 vs. 81.568.

[2] Aside from the word "migration," or one of its variants, the three most frequently used terms in this report are "students enrolled," "student residents," and "students remaining." Understanding these terms explicitly is essential to the comprehension of the analyses contained herein and to the utilization of the statistics. Each of these terms is defined in the listing "Definitions and Explanatory Notes" immediately preceding the Introduction.

imbalances between students enrolled in any particular State and the student residents of that State.

Despite a general feeling that mobility in our society is increasing, between 1963 and 1968 the percentage of students who went outside their home States to attend colleges or universities actually declined by 2 percentage points.[3] During the period 1930 to 1963 the proportion of students remaining in their home States had varied only fractionally from 80 percent. This relatively decreased mobility has been influenced by factors affecting both public and private higher education. Public higher education continues to expand with the establishment of more junior colleges and the development of former State colleges into a new type of State university. Coupled with this increase in opportunity for public higher education in the student's home State have been higher out-of-State tuition fees that tend to discourage migration across State lines. Privately controlled colleges and universities, which historically have attracted a high proportion of their students from outside the State, because of a combination of educational and financial factors now enroll a much lower proportion of all students and consequently have less effect on aggregate migration ratios.

The decrease in the rate of migration between States represents a definite break in a pattern that had remained remarkably consistent for many years. That 80 to 81 percent of college students had remained in their home States was shown by each of four prior surveys using data collected for 1963, 1958, 1949, and 1931.[4]

---

[3] In 1968 the actual number of student residents who left their home States to attend college was 1,126,730, unmistakably an absolute increase over the 777,340 student residents who migrated from their home States in 1963. However, the increase in the *total* number of student residents from 1963 (4,192,489) to 1968 (6,600,895) was relatively greater than the increase in the number of migrants; therefore, there was a relative decline in the migration rate from 1963 to 1968.

[4] Respectively, *Residence and Migration of College Students, Fall 1963: State and Regional Data,* U.S. Office of Education (OE-54033, Circular No. 783), 1965; *Home State and Migration of American College Students, Fall 1958,* American Association of Collegiate Registrars and Admissions Officers, 1959; *Residence and Migration of College Students, 1949-50,* U.S. Office of Education (Misc. Publication No. 14), 1951; *Residence and Migration of College Students, 1930-31,* U.S. Office of Education (Pamphlet No. 48), 1934.

ALL STUDENTS IN ALL INSTITUTIONS

Among the 6,711,158 students enrolled in the Nation's institutions of higher education in fall 1968, 1,236,993 crossed a State line to attend college. (Enrollment figures include estimated data for 50 nonresponding institutions listed in appendix A. See also the section on Survey Procedures at the end of the text for method of imputation.) They came from other States or from foreign countries. Upon entering a State to enroll, they are classed as "inmigrant" students, and upon leaving a State, as "outmigrant" students. Inasmuch as foreign students are included with inmigrants and U.S. students studying abroad are excluded from this study,[5] the data show a net inmigration for the aggregate United States. This net inmigration, therefore, equals the number of foreign students in the United States.

The origins of students in fall 1968 may be summed up as follows:

Source of students	*Number*	*Percent*
Remained in home State to attend college	5,474,165	81.6
Came from another State	1,126,730	16.8
Came from a foreign country	110,263	1.6
Total	6,711,158	100.0

As discussed under Survey Procedures (at the end of the text), a number of relatively minor modifications were made in handling the data collected in the surveys conducted for 1968, 1963, and 1958. The impact of these changes, however, is slight, and the figures are generally comparable. To place these figures in perspective, it is useful to look at comparable data for the three studies shown in the following table.

Year	*Total enrollment*	*Out-migration*	*In-migration*	*Net in-migration*	*Ratio of students remaining to—*	
					Students enrolled	*Student residents*
1968	6,711,158	1,126,730	1,236,993	110,263	.82	.83
1963	4,265,864	777,340	850,715	73,375	.80	.81
1958	2,943,002	537,423	588,922	51,499	.80	.81

Residence and migration data for all students enrolled in all types of institutions appear in figures 1a, 1b, and 1c and table 1. Of particular interest to planners may be the magnitude of net migration between the States. The largest net inmigration was shown by the District of Columbia in 1963 and 1968.[6]

As was true in both 1963 and 1958, New Jersey continued to export the most students by a wide margin. The largest net migration figures were for these States in 1968:

Largest net inmigration		*Largest net outmigration (technically a negative inmigration)*	
District of Columbia	37,402	New Jersey	—98,710
Massachusetts	37,316	New York	—55,716
Indiana	26,495	Illinois	—32,454
North Carolina	23,556	Connecticut	—21,125
Tennessee	20,037	Maryland	—15,327

States show quite variant patterns regarding the portion of their students who remained to study in their home States. Among the 50 States and the District of Columbia, 33 retained a percentage of students smaller than the 82 percent national average, two equaled the average, and 16 retained a higher percentage of their students.

The five States with the highest and lowest percentages were as follows:

Highest percent remaining in home State		*Lowest percent remaining in home State*	
California	94	Alaska	51
Texas	94	New Jersey	53
Utah	93	Delaware	56
Louisiana	92	New Hampshire	59
Michigan	92	District of Columbia	59

With the exception of the District of Columbia, which replaced Vermont, these were the same five high and five low States as in 1963.

On the whole, patterns of residence and migration remained fairly consistent over time, reflecting the general stability of population patterns, economic conditions, and alternative opportunities for higher education. Yet, as shown in table A, which summarizes data from the 1968, 1963, and 1958 surveys, absolute and relative changes are evident.

---

[5] About 30,000.
[6] In 1958 the net inmigration was 21,848 for the District of Columbia—second highest to Massachusetts, with 22,060.

TABLE A.—Net migration of college students and percent of student residents enrolled in home-State institutions: Fall 1968, 1963, and 1958

State	Fall 1968		Fall 1963		Fall 1958	
	Net inmigration	Percent remaining	Net inmigration	Percent remaining	Net inmigration	Percent remaining
Aggregate United States [a]	110,263	83	73,375	81	51,499	81
Alabama	2,494	87	−722	80	227	85
Alaska	−1,696	51	−1,414	46	−676	65
Arizona	6,885	89	3,963	88	2,155	87
Arkansas	−248	84	−1,187	83	−2,289	79

Outlying Areas	−3,577	89	−1,051	94	−1,883	91

[a] On the "aggregate United States" line, "net inmigration" equals the number of foreign students and "percent remaining" equals the national average.

[b] Included with individual States in which they are located.

A summary of the home States that provided the most inmigrants for other States follows. Where the States are not contiguous, the host State is shown in parentheses.[7]

Home State	*Largest contributor of inmigrants to:*
Alabama	Mississippi
California	(Alaska), Arizona, (Hawaii), (Montana), Nevada, Oregon, (Utah), and (Washington)
Colorado	Wyoming
Florida	Georgia
Georgia	Alabama
Illinois	(Colorado), Indiana, Iowa, (Minnesota), Missouri, and Wisconsin
Iowa	Nebraska and South Dakota
Louisiana	Texas
Maryland	District of Columbia
Massachusetts	(Maine), New Hampshire, and Rhode Island
Minnesota	North Dakota
Missouri	Arkansas and Kansas
New Jersey	New York, Pennsylvania, and (Virginia)
New York	(California), Connecticut, (Florida), (Illinois), (Massachusetts), New Jersey, and Vermont
North Carolina	South Carolina
Ohio	Kentucky and Michigan
Pennsylvania	Delaware, Maryland, Ohio, and West Virginia
Texas	Louisiana, New Mexico, and Oklahoma
Washington	Idaho
Virginia	North Carolina and Tennessee

As the enrollments of the Outlying Areas are grouped on most tables, data on the residence and migration of students for the component areas in fall 1968 follow.[8] Note that by far the largest figures are for Puerto Rico.

Area	*Students enrolled*	*Student residents*	*Ratio of students remaining to students enrolled*	*Foreign students*	*Largest number of outmigrants attended college in . . .*
Total	51,955	55,532	------	2,104	----------
Canal Zone	1,190	1,597	0.52	357	Florida (292), Texas (75), California (41), all other (348)
Guam	1,777	1,437	.83	252	Florida (67), California (51), Oregon (26), all other (105)
Puerto Rico	48,799	48,692	.99	1,478	New York (297), Massachusetts (150), Pennsylvania (149), all other (1,124)
Virgin Islands and other U.S. areas	189	* 3,806	† .04	17	Hawaii (379), New York (376), Colorado (341), all other (2,518)

Both net migration totals and ratios must be examined to obtain a balanced perspective. Connecticut, for example, had a sharp numerical increase in outmigration from 1958 to 1968—from 6,963 to 21,125. (See table A.) On the surface, this suggests an increasing tendency for Connecticut residents to enroll in institutions outside their State. However, the ratio of students remaining to student residents leads to quite the opposite conclusion. Although Connecticut enrolled only 61 percent of its own student residents in 1958, this proportion rose to 64 percent in 1968.

Chart I compares for 1958 and 1968 the rank order of the 50 States and the District of Columbia by the percent of student residents who left their home States. Also shown are the numbers of total student residents for each State, so that the relative significance of the migration patterns need not be based on the percentages of outmigration alone, such as in the example given above for Connecticut.

[7] With the exception of this listing, all data upon which analyses are based or from which conclusions are drawn appear in the tables at the end of this report. The relationships shown are based on data from table 1 of the already published companion report derived from the migration survey *Residence and Migration of College Students, Fall 1968: Basic State-to-State Matrix Tables.*

[8] In three of the areas, a single collegiate institution in each accounted for all the enrollment in that area: the Canal Zone College, the College of Guam, and the College of the Virgin Islands.

* The "student residents" figure appears too high for the "Virgin Islands and other U.S. areas." While the extent of error cannot be determined, some reporting officers probably used the category "other U.S. areas" erroneously for students from outside the continental United States about whom some question existed or who could not be classified elsewhere.

† Any ratio calculated from the reported—probably erroneous—data discussed in footnote * would be misleading. For the College of the Virgin Islands, the only college in the "Virgin Islands and other U.S. areas," 148 of 189 students enrolled in resident programs leading to a bachelor's degree were residents of the "other U.S. areas" (quite likely all from the Virgin Islands), a ratio of 0.78.

6 71

The greatest changes—in percentage points—of residents enrolled in their home States, between 1958 and 1968, were shown for these States (table A):

Net increase

Idaho	15	percentage points
Nevada	11	
Hawaii	10	
Maryland	10	
Wyoming	10	

Net decrease

Alaska	14	percentage points
District of Columbia	12	
South Carolina	5	
New Jersey	3	
New Hampshire	2	
Pennsylvania	2	
Massachusetts	1	
New York	1	

Note.—The list of States with a "net decrease" comprises *all* States with a net decrease from 1958 to 1968.

With a national average of 83 percent of all student residents enrolled in institutions of higher education in their home States, it should, and does, follow that in every State the largest source of students is the home State. Both size and proximity, in addition to comparative educational opportunities, are overriding factors in determining the State that provides the next largest number of students for any particular State. Hence, one might predict accurately that the largest number of inmigrant students for New York would come from New Jersey; for Nevada, the most from California. Texas provides the largest number of inmigrants for each of its contiguous States: Louisiana, Oklahoma, and New Mexico. Pennsylvania, which borders on six States, provides the most inmigrants for four of them.

CHARACTERISTICS OF INSTITUTIONS

Although in 1968 privately controlled institutions of higher education accounted for only 30 percent of the 6,600,895 U.S. student residents in the aggregate United States, they accounted for 61 percent of the number who migrated to another State to attend college. To put it another way, without the greater geographical range of choice afforded by private colleges and universities—that is, if all those students who went out of State to attend private schools had remained in their home States—total migration for higher education in 1968 would have been halved.

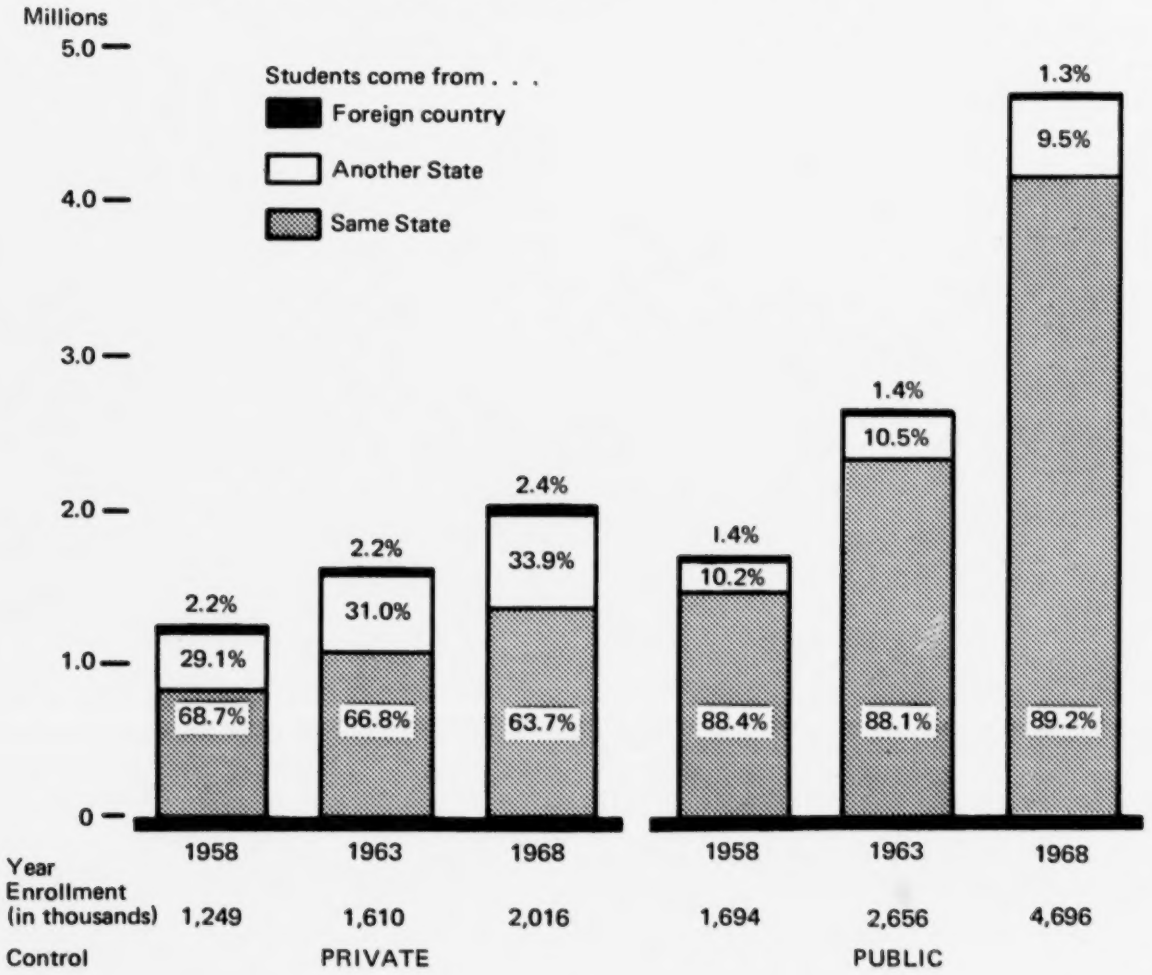
Residence and migration data are presented for all students in table 2 (for the publicly controlled institutions) and table 3 (for the privately controlled institutions).

The following analysis first reports data based upon institutional characteristics (type of control and level of instruction) and student characteristics (level, sex, and geographical origin) and then reviews survey procedures and response.

Control of Institution

Control of an institution, whether public or private, has a pronounced effect upon patterns of student migration. An analysis of migration, in terms of the sources (geographical origins) of students for public and private institutions, is shown for the years 1958, 1963, and 1968 in chart II.

Chart II.--Enrollment in privately and publicly controlled colleges and universities, and sources of students: Aggregate United States, 1958, 1963, and 1968



The comparison may be summarized as follows:

Control	Students enrolled	Students remaining	Inmigrants—rest of U.S.	Inmigrants—foreign
Totals	6,711,158	5,474,165	1,126,730	110,263
Public	4,695,547	4,190,252	444,403	60,892
Private	2,015,611	1,283,913	682,327	49,371

As indicated previously, relative student mobility between the States apparently has decreased. Given the twin facts that those who enroll in a public institution are much less likely to study outside of their home States and that between 1963 and 1968 the percentage of all students who attended public institutions rose from 62.3 to 70.0 percent, the relatively decreased mobility may be clearly related to the increase in public higher education.

Ample evidence exists that State legislatures are aware of the impact of out-of-State enrollees at public colleges and universities. A bill was introduced in the legislature of one east coast State to ban all nonresidents from its public institutions of higher education. This bill was not passed, but its intent should be noted. Given an average expenditure in fiscal year 1967–68 of $1,702 for each student enrolled in a public institution of higher education,[9] it is not surprising that fiscal pressures exist for decreased inmigration for public higher education.

The States with the largest net in- and out-migration to attend publicly controlled institutions were as follows in 1968:

Largest net inmigration		*Largest net outmigration*	
Michigan	16,616	New York	36,726
Colorado	14,556	New Jersey	27,683
Wisconsin	13,546	Illinois	23,896
Indiana	11,909	Pennsylvania	18,269
California	11,150	Massachusetts	8,457

The list was identical in 1963 except for Wisconsin, which in 1968 replaced Arizona as one of the five States with the largest net inmigration. Again, in 1968, total figures tell only a part of the story. On the face of it, total inmigration for Colorado and California appear comparable. However, the 19,110 inmigrants to Colorado's publicly controlled institutions represented a much higher proportion of the 78,095 students enrolled in its public colleges and universities than did California's 34,431 inmigrants in an enrollment of 710,631.

Attendance at privately controlled institutions presumably reduces cost to the taxpayers of the States involved. Students at privately controlled institutions pay more of the actual cost of their education, and usually most of the balance comes from nonpublic funds. Yet, without such privately controlled institutions the States, in order to maintain comparable levels of higher education, would have to provide additional opportunities through expanded public higher education. By admissions policies that favor geographical diversity, privately controlled colleges may tend to discourage enrollment of home State residents, thus encouraging geographical mobility.

The States with the highest net in- and out-migration in 1968 for private higher education were as follows:

Largest net inmigration		*Largest net outmigration*	
Massachusetts	45,773	New Jersey	71,027
District of Columbia	41,331	New York	18,990
Indiana	14,586	Connecticut	18,216
North Carolina	14,502	Maryland	16,069
Utah	13,679	Virginia	12,949
Tennessee	13,638	Illinois	8,558

The only changes from the 1963 list were that Utah and Tennessee replaced Pennsylvania and Missouri as two of six States with the largest net inmigration.

Level of Institution

Level of institution has an obvious effect upon residence and migration. For this analysis, institutions are categorized into one of the following:

Four-year institutions—universities
Four-year institutions—all other
Two-year institutions

It should be noted that 4-year institutions include many that also—or exclusively—enroll students at the first-professional or graduate level. Universities are defined as institutions that confer advanced as well as bachelor's degrees and have at least two professional schools. However, despite the best efforts to be precise, the "university" is often hard to distinguish from the "college." Indeed, in the growing transition of State colleges to State universities, their titles and their levels of degree offerings change rapidly from one year to the next. This report bases fewer analyses on level of institution than was done in 1963. In their place are more analyses for 2-year institutions and by level of enrollment.

By control and level, the numbers of collegiate institutions in the fall of 1968 were as follows:

	Total	*Public*	*Private*
Total (all institutions)	2,495	1,015	1,480
Four-year institutions	1,628	420	1,208
Universities	160	95	65
All other	1,468	325	1,143
Two-year institutions	867	595	272

Although outnumbered by private institutions, publicly controlled colleges and universities enrolled seven-tenths of all students in 1968. Segmented according to both control and level of institution, chart III shows the percentage distributions of U.S. student residents, foreign students, and the combined enrollments in fall 1968.

[9] U.S. Office of Education, *Financial Statistics of Institutions of Higher Education: Current Funds Revenues and Expenditures; Physical Plants Assets;* 1967-68 (OE-52010-68), by Paul F. Mertins. U.S. Government Printing Office: Washington, D.C. 1970.

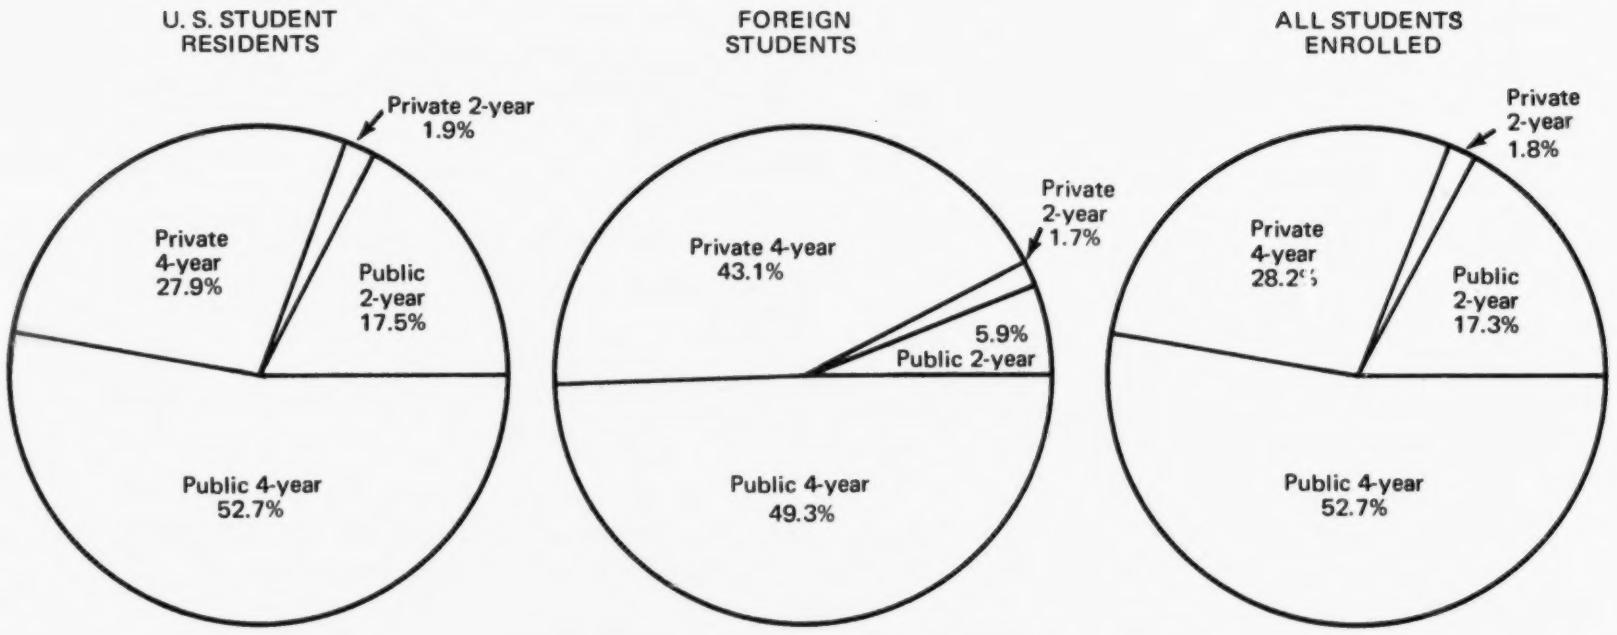


Chart III.--Total enrollment, by control and level of institution: Aggregate United States, fall 1968

Table 23 (all institutions), table 24 (publicly controlled institutions), and table 25 (privately controlled institutions) present residence and migration data classified by level of institution. These data are the basis for table B, which shows the numbers of students by both level and control of institution. This table also introduces data by level of enrollment, which will be discussed next.

TABLE B.—Students enrolled, student residents, and students remaining in their home States to attend college, by level of enrollment and control and level of institution: Aggregate United States, fall 1968

Level of enrollment	All institutions	4-year institutions			2-year institutions		
		Total	Public	Private	Total	Public	Private
	Students enrolled

Graduate	.77	.77	.80	.72	—	—	—

*The nine graduate students in an institution classified at the 2-year level were taking courses toward teacher certification creditable toward a master's degree.

Two-year colleges reported an overall increase in enrollment, with 19.2 percent of all college students in the fall of 1968, up from 14.6 percent in 1963. The public-private ratio also changed: publicly controlled 2-year institutions enrolled 90 percent of all 2-year college student residents, up from 88 percent in 1963. A very high percentage of student residents enrolled in 2-year institutions tended to remain in their home States—95 percent in fall 1968. For publicly controlled 2-year colleges, this ratio was 97; for privately controlled, 71. Three States with extremely high percentages of residents who remained to enroll in their 2-year colleges were California (99.6 percent), Washington (98 percent), and Texas (98 percent). States with the lowest percentages of student residents who remained at home to attend 2-year colleges were the District of Columbia (56 percent), New Mexico (63 percent), and South Carolina (66 percent). Excluded from consideration are those States with relatively few students, hence likely to show wide fluctuations.

In comparing the students remaining in their home States to attend 2-year colleges with the total enrollment in 2-year colleges in those respective States, those with the highest ratios were Ohio (98 percent) and California (97 percent); those with the lowest were Delaware (33 percent), West Virginia (69 percent), Idaho (70 percent), and Massachusetts (74 percent).

CHARACTERISTICS OF STUDENTS

Undergraduate Students

The traditional core of American higher education —undergraduate study—accounted for 86.1 percent of all fall 1968 U.S. student residents. This was up slightly from 85.7 percent in 1963. Comparable statistics on undergraduate students for 1968 and 1963 are summarized below. Details for 1968 appear in table 4 (all institutions), table 5 (publicly controlled institutions), and table 6 (privately controlled institutions).

Year	Total student residents	Undergraduate student residents	Students remaining, as percent of— All levels of study	Students remaining, as percent of— Undergraduate level only
1968	6,600,895	5,683,300	83	84
1963	4,192,489	3,593,680	81	83

Figures 2a through 4c present 1968 data dealing with undergraduate students. Net migration of undergraduates for each State is presented in figure 2a (all institutions), figure 3a (public institutions), and figure 4a (private institutions). Ratios of undergraduate student residents remaining in their home States to total undergraduate enrollment in the respective States are shown in figure 2b (all institutions), figure 3b (public institutions), and figure 4b (private institutions). Ratios of undergraduate student residents who remain in their home States to all residents of the respective States enrolled at the undergraduate level are shown in figure 2c (all institutions), figure 3c (public institutions), and figure 4c (private institutions).

Net migration for undergraduate study (figure 2a) was largest for these States in 1968:

Largest net inmigration

Massachusetts	25,311
North Carolina	20,195
Indiana	20,092
District of Columbia	18,989
Tennessee	18,009

Largest net outmigration

New Jersey	84,721
New York	56,017
Illinois	37,977
Connecticut	20,685
Maryland	11,287

The same States had the largest net migrations in 1963, except for Tennessee, which in 1968 replaced Utah on the "inmigration" list. The highest ratios of residents remaining in their home States to pursue undergraduate education in 1968 (figure 2c) were reported by Utah (96 percent) and California and Texas (95 percent each). The lowest ratios were shown by Delaware (58 percent), the District of Columbia (56 percent), New Jersey (53 percent), and Alaska (52 percent).

Enrollment in undergraduate education, by level and control of institution, fall 1968, is shown in chart IV.

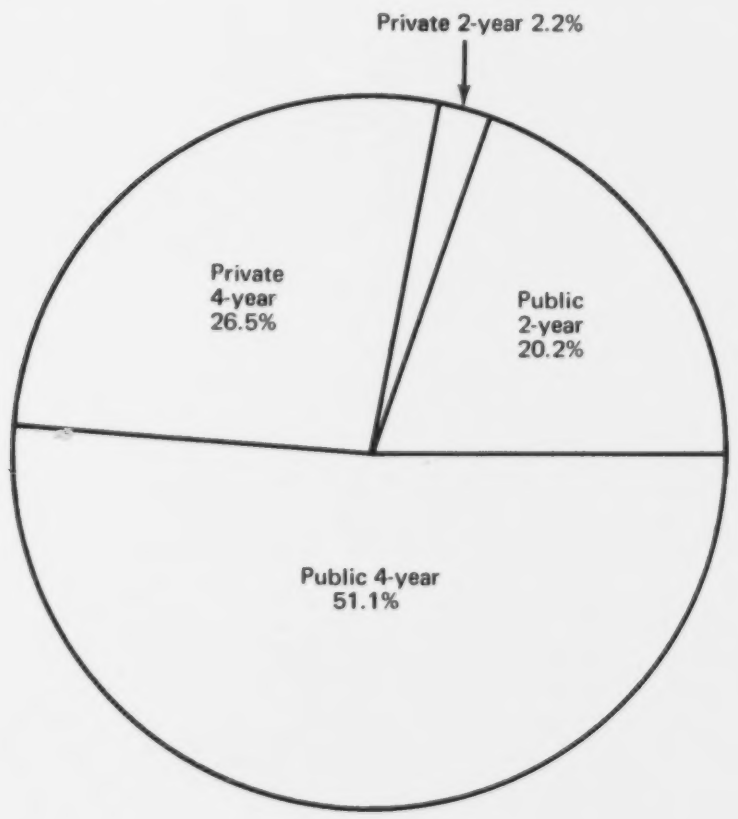

Chart IV.--Undergraduate enrollment, by control and level of institution: Aggregate United States, fall 1968

The States show quite different residence and migration figures for public and private institutions. For public undergraduate education (figure 3a), the largest net inmigration for 1968 was reported by Colorado (11,939), Wisconsin (10,845), Michigan (10,453), Arizona (8,819), and North Carolina (6,712). The three States with the highest net outmigration overall for all students in all institutions were the highest net exporters of undergraduate students for public higher education as well: New York (28,304), Illinois (24,059), and New Jersey (23,769). Massachusetts had the second highest net inmigration for all students in all institutions,[10] but when undergraduates in public higher education alone are considered it actually shows a net outmigration of 6,660.

The percentage of all undergraduate enrollees in public higher education who remained in their home States was affected by a variety of factors: out-of-State tuition charges, geographical location, admissions requirements, availability of junior colleges, and size and reputation of the institutions involved, to name a few. In contrast to a national ratio of 0.91, the highest and lowest State ratios were as follows in 1968 (figure 3b):[11]

Enrollments with the highest percentage of residents		*Enrollments with the lowest percentage of residents*	
District of Columbia	0.98	Vermont	0.67
New York	0.98	Delaware	0.71
Illinois	0.97	New Hampshire	0.75
California	0.96	Colorado	0.78
Massachusetts	0.96	Alaska	0.79
New Jersey	0.95	South Carolina	0.79
Pennsylvania	0.95	West Virginia	0.79

For private institutions, much higher net migrations were reported in 1968 than for public institutions, with the following States having the largest net migrations (figure 4a; table 6):

Largest net inmigration		*Largest net outmigration*	
Massachusetts	31,971	New Jersey	60,952
District of Columbia	21,961	New York	27,713
Indiana	14,649	Connecticut	18,245
North Carolina	13,483	Illinois	13,918
Utah	13,141	Maryland	10,864

Among all undergraduate students attending private institutions, where there is not likely to be any significant out-of-State tuition differential to encourage enrollment in the students' home States, only 65 percent did so in 1968 (figure 4c). The highest percentages were reported by Utah (89 percent), Texas (86 percent), and North Carolina (81 percent); the lowest by Arizona (16 percent), Delaware (22 percent), and North Dakota (26 percent).

Characteristics of full- and part-time undergraduate students are summarized in tables 7, 8, 9, and 10. Part-time students, who constituted 22 percent of those U.S. student residents engaged in undergraduate study, were much more likely to be attending institutions in their home States than were full-time undergraduates.

	Total undergraduates	*Full-time undergraduates*	*Part-time undergraduates*
Number of student residents	5,683,300	4,427,594	1,255,706
Percent of student residents enrolled in home State institutions	100.0	77.9	22.1
Ratio of students remaining to student residents	.84	.81	.95

Among the 5,683,300 undergraduate student residents in fall 1968, approximately two-thirds were returning students. Data dealing with first-time undergraduate students are presented in tables 11, 12, and 13; for new transfer students, in tables 14, 15, and 16.

By control of institution, a summary of the previous academic status of undergraduate students was as follows for 1968:

	All institutions		*Publicly controlled institutions*		*Privately controlled institutions*	
Undergraduate Status	*Number*	*Percent*	*Number*	*Percent*	*Number*	*Percent*
Total	5,683,300	100.0	4,068,204	100.0	1,615,096	100.0
First-time students	1,571,579	27.7	1,155,420	28.4	416,159	25.8
New transfer students	455,867	8.0	355,724	8.7	100,143	6.2
Returning students	3,655,854	64.3	2,557,060	62.9	1,098,794	68.0

[10] Massachusetts, with an overall net inmigration of 37,316, was second only to the District of Columbia, which had a net inmigration of 37,402. For public institutions, Massachusetts had a net outmigration of 8,457; for private institutions, a net inmigration of 45,773. The District of Columbia's net inmigration for private institutions was 41,331; net outmigration for public institutions, 3,929.

[11] The makeup of this tabulation would be radically different if the ratios were based on students remaining in their home States related to student residents of that State (see table 5).

For all institutions, comparable figures in 1963 were: first-time undergraduates (28.0 percent), new transfer students (7.4 percent), and continuing students (64.6 percent). Thus, the greatest relative change in the percentages between the two years occurred in the case of new transfer students.

Among first-time undergraduate students, 84 percent remained in their home States to attend college in 1968. This was 2 percentage points more than remained in their home States in 1963. The 1968 totals included 92 percent for public institutions and 61 percent for private institutions. Among new transfer students, 85 percent remained in their own States to attend college.

Study of first-time undergraduate enrollment provides a clue concerning future tendencies in higher education. The continued increase in public higher education, for example, is suggested by the fact that in 1968, while publicly controlled institutions enrolled 70.2 percent of all students (excluding foreign), they enrolled 71.6 percent of all undergraduates and 73.5 percent of all first-time undergraduates.

Once rare, new transfer students are increasing and are likely to continue to increase as 2-year colleges produce more and more undergraduates who may go on to 4-year institutions in order to complete bachelor's degree programs. Grouping together all student residents new to their campuses (both first-time undergraduates and new transfer students), excluding foreign students, the portion of that total composed of new transfer students increased from 20.8 percent in 1963 to 22.5 percent in 1968. Some experts feel that within a few years, one-third of all undergraduate students will be transfers from other institutions. In California, for example, new transfer students accounted for 32.6 percent of all new undergraduate students in 1968, compared with 27.9 percent in 1963.

First-Professional Students

In contrast to other types of enrollment, the number of first-professional students apparently showed very little growth since 1963, with the 153,900 first-professional students reported for 1968 only slightly more than 148,019 students enrolled in the former year. However, because of a change in the definition of first-professional students in 1965–66,[12] data on first-professional students in the two surveys are not directly comparable.

Comparisons cannot be made based on the relationships of first-professional enrollments to total enrollments, but relationships within the context of enrollments of first-professional students can be compared. With the assumption that the enrollment and migration patterns are similar despite the differences in composition of the first-professional students for the two surveys, some useful comparisons can be made.

One unusual fact was that, alone among all levels of enrollment, more first-professional students were enrolled in private than in public institutions. This was true for the 1963 survey as well as the 1968 survey. Even in California, with only 13.6 percent of all students enrolled in private institutions, private institutions enrolled 56.5 percent of the first-professional students.

Basic data on net migration for first-professional training appear in figure 5a; the ratios of first-professional students remaining in their home States to total first-professional enrollment and student residents, in figures 5b and 5c. Details by control of institution are shown in tables 17, 18, and 19.

As might be expected, first-professional students are mobile. Only 66 percent of them were enrolled in institutions in their home States in 1968, reflecting, again, the high percentage of first-professional students in private institutions. Five States (Alaska, Delaware, Hawaii, Nevada, and Rhode Island) had no first-professional education either public or private, in 1968, and 13 other States were educating fewer than half of their student residents enrolled in first-professional programs. The largest net inmigration for first-professional education was reported by the District of Columbia (5,108), Massachusetts (3,001), Illinois (2,988), and Missouri (2,505). The largest net outmigration was shown by New York (3,891), New Jersey (3,548), and Florida (1,650).

Graduate Students

The 763,695 student residents in graduate programs represented 11.6 percent of all college and university student residents in 1968, up from 10.8 percent in 1963. Or, to put it another way, while total enrollment increased 57.4 percent between 1963 and 1968, graduate enrollment rose 69.4 percent.

Graduate education was characterized more by this overall growth than by changes in migration patterns. In both 1963 and 1968, for example, 77 percent of all graduate students were studying in their home States. As might be expected, a higher percentage of graduate students who attended public institutions (80 percent) studied in their home States than those who enrolled in private institutions (72 percent). Residence and migration data for graduate students are shown in table 20 (all institutions), table 21 (public institutions), and table 22 (private institutions).

As was true in both the 1958 and 1963 studies, the same five States reported the largest net inmigration for graduate study in 1968: the District of Columbia, Massachusetts, California, Indiana, and New York. It is interesting to note that New York, with the second highest net outmigration overall, ranked fifth in net inmigration of graduate students. Also, for the third straight survey, the largest net outmigration was reported by New Jersey, Virginia, and Maryland. Most of the net graduate student inmigration into the Dis-

[12] Prior to 1965-66, first-professional students included those whose degree required 5 or more years of college work; from 1965-66 on, first-professional students included only those whose programs required at least 2 years of college work for admission and 6 or more years for the degree.

trict of Columbia, New York, and Massachusetts continued to be absorbed by private institutions. Public colleges and universities enrolled most of the graduate students going into Indiana and California. Details are shown in figure 6a for net migration for graduate study, and in figures 6b and 6c for ratios of students remaining to students enrolled and to student residents.

In terms of meeting the demand for publicly supported graduate study by State citizens, the highest ratios were reported by Arizona, California, and Michigan, in each of which 91 percent of the graduate students were home State residents in 1968. Less than 50 percent of graduate student residents were enrolled in home-State public institutions in Alaska, the District of Columbia, Idaho, and New Hampshire. The District of Columbia, for example, with only one public institution with a graduate program, provided for only 20 of the 898 D.C. residents enrolled in graduate education in public institutions in the United States.

In view of the characteristics and functions of universities, it is not surprising to learn that 483,306 or 63.3 percent of all graduate student residents were enrolled in universities rather than in other 4-year institutions. Details on graduate student enrollment by level of institution appear in table 26 (all institutions), table 27 (publicly controlled institutions), and table 28 (privately controlled institutions).

A number of factors involved in migration patterns (level of enrollment, enrollment status, attendance status, and control and level of institution) are summed up in table C:

TABLE C.—Percent of student residents in institutions of higher education in home States, by control of institution and level of enrollment, fall 1968

Level of enrollment	*All institutions*	*Publicly controlled*	*Privately controlled*
All students	83	90	65
Undergraduates	84	92	65
First-professional	66	82	54
Graduate	77	80	72
Undergraduates, first-time	84	92	61
Undergraduates, new transfer	85	89	68
Undergraduates, full-time	81	90	59
Undergraduates, part-time	95	97	91
Undergraduates, 4-year institutions	81	90	64
Undergraduates, 2-year institutions	95	97	71

Chart V presents the ratios of out-of-State students, both from other States and from foreign countries, by level of enrollment and control of institution. Almost half of the first-professional students were not residents of the States in which the institutions they attended were located. On the other hand, less than one-tenth of the undergraduates in public institutions were from out of State.

Sex of Students

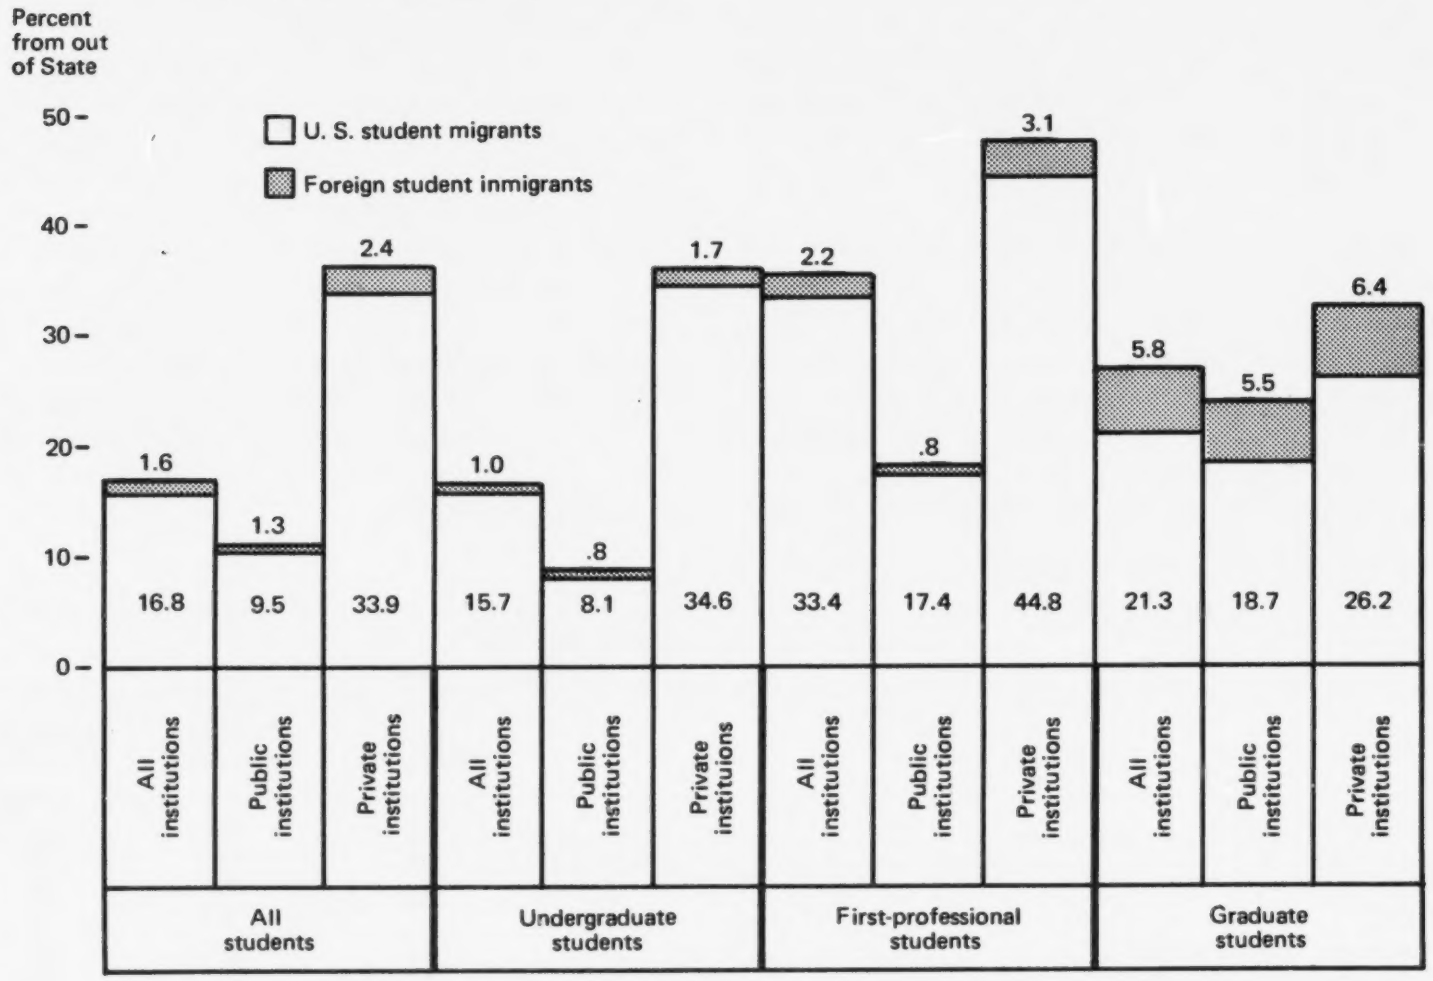
Of the 6,600,895 U.S. student residents enrolled in colleges and universities in the fall of 1968, 2,675,852 (or 40.5 percent) were women. That a steadily growing percentage of women are enrolling in higher education is shown by the fact that women constituted only 38.4 percent of all student residents in 1963 and 34.5 percent in 1958. Furthermore, among first-time undergraduate student residents in 1968, 44.0 percent were women.

Enrollment patterns for men and women, by control and level of institution attended, are presented in chart VI. Women, who traditionally outnumber men on the campuses of the publicly controlled institutions that prepare for teaching careers, are somewhat more likely than men to be attending publicly controlled colleges or universities as undergraduates.

Actual net migration figures by sex and control of institution appear in table 29 (all students), table 30 (undergraduate students), table 31 (first-professional students), and table 32 (graduate students). Men being in the majority, it is not surprising that the highest net migration figures for each State were reported for men. For private higher education in several States (Alabama, California, Florida, Maine, Michigan, and New Hampshire) there was a net inmigration for men but a net outmigration for women. However, in the far Northwest, the States of Oregon and Washington show a net outmigration for men but a net inmigration for women.

One series of tables presents information by sex and level of enrollment for all institutions (table 33), publicly controlled institutions (table 34), and privately controlled institutions (table 35). A second series includes data by enrollment status (first-time undergraduate and new transfer students) and by sex of student in table 36 (all institutions), table 37 (publicly controlled institutions), and table 38 (privately controlled institutions). A summary of these data appears in table D.

Chart V.--Ratio of out-of-State home residence for students enrolled, by level of enrollment and control of institution: Aggregate United States, fall 1968



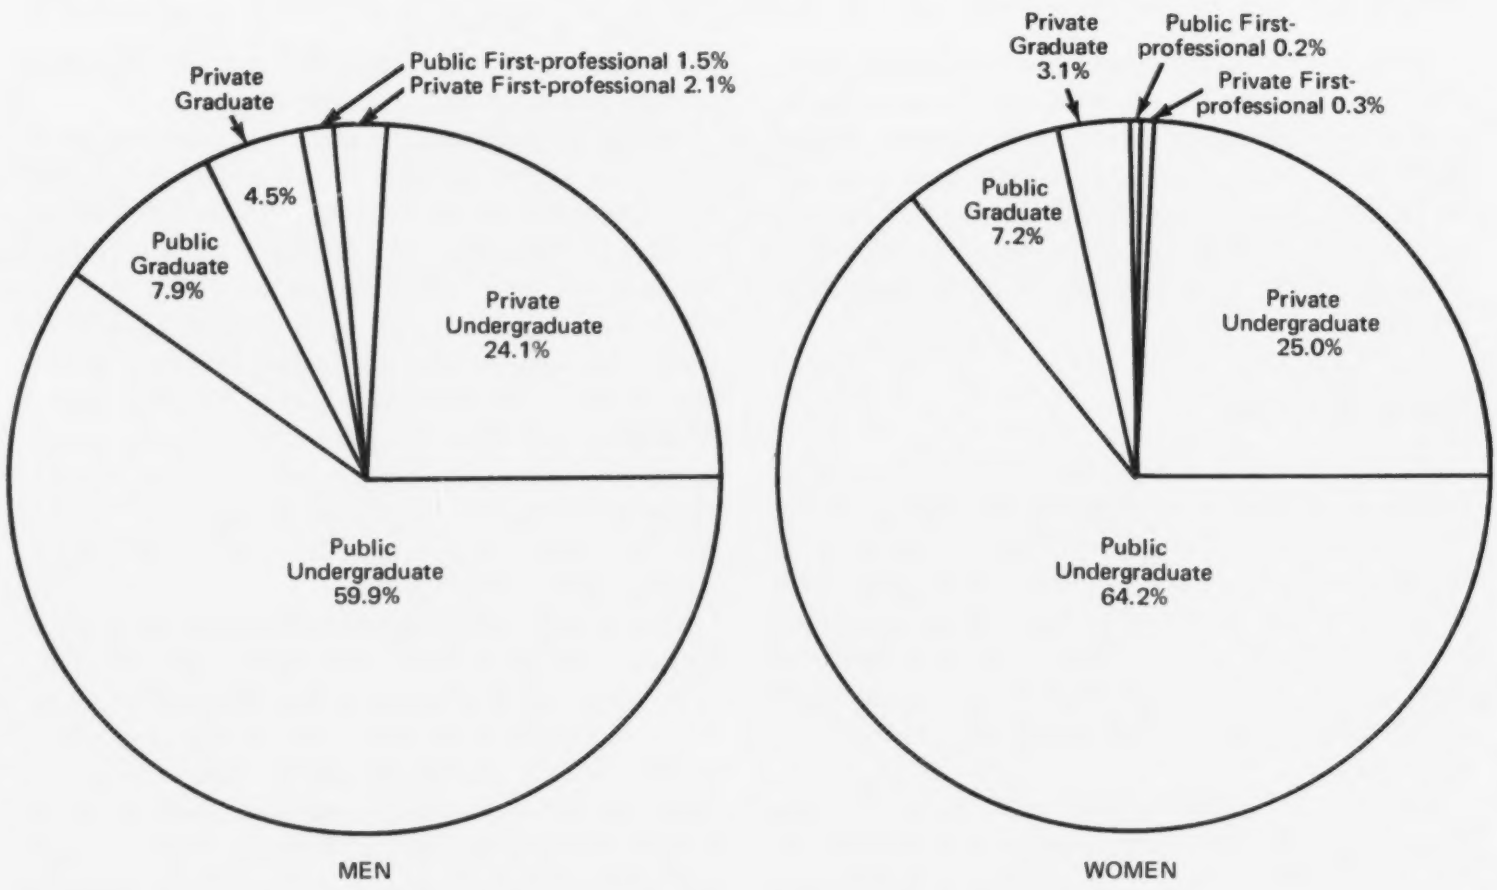


Chart VI.--Enrollment patterns of men and women student residents, by control of institution and level of enrollment: Aggregate United States, fall 1968

TABLE D.—Students enrolled, student residents, and students remaining in their home States to attend college, by level of enrollment, control of institution, and sex of student: Aggregate United States, fall 1968

Level of enrollment	All institutions			Publicly controlled institutions			Privately controlled institutions		
	Total	Men	Women	Total	Men	Women	Total	Men	Women

New transfer undergraduate	.85	.84	.85	.89	.89	.90	.68	.69	.67

In contrast to 82 percent of all men student residents, 85 percent of the women studied in their States of home residence in 1968. Although the margin was about the same when publicly controlled institutions alone are considered, much higher proportions of students attending public institutions remained in their home States—89 percent of all men and 92 percent of all women. For both men and women, among those attending privately controlled institutions, 65 percent remained in their home States.

Foreign Students

Reflecting perhaps both increasing total enrollments in higher education in the United States and improved opportunities for higher education in their own countries, the proportion of students from other countries continued a gradual decline. The trends may be summarized as follows:

Year	*Number of foreign students*	*Percent of total enrollment*
1968	110,263	1.64
1963	73,375	1.72
1958	51,499	1.75

As mentioned earlier, total net inmigration for the aggregate United States (110,263) in 1968 is entirely attributable to foreign student enrollment. The survey excluded an estimated 30,000 U.S. citizens studying abroad.

In its annual survey of foreign students, *Open Doors, 1969*, the Institute of International Education (IIE) reported 121,362 foreign students enrolled in institutions in the United States in fall 1968. Because the IIE includes students enrolled in certain nondegree nursing and commercial programs, its total is consistently higher than that included in the resident and migration studies of the U.S. Office of Education.

Tables 39 and 40 present information on foreign students by level of institution, level of enrollment, and sex. Highlights of these tables, contrasting components of the foreign student population with like components of the U.S. student resident population, were as follows in fall 1968:

Component	*Each component as a percentage of*	
	U.S. student residents	*Foreign students*
Men	59.5	75.5
Attended public institutions	70.2	55.2
Attended 2-year institutions	19.4	7.6
Undergraduate students	86.1	54.4
First-professional students	2.3	3.1
Graduate students	11.6	42.5

The era has passed when foreign students who wished to study in the United States sent their letters of inquiry to only a few institutions—such as Harvard, Johns Hopkins, and Columbia—in a very few States. But, although now attracted to many more institutions located throughout the country, foreign students still make up a much higher proportion of the total enrollments in some States than in others, as the following table indicates:

Highest percentage of foreign students		*Lowest percentage of foreign students*	
District of Columbia	5.6	Alabama	0.5
Hawaii	5.0	Arkansas	0.6
North Dakota	2.8	Mississippi	0.7
Utah	2.8	Virginia	0.7
Massachusetts	2.5	Georgia	0.8

SURVEY PROCEDURES

Data for this report on the residence and migration of college students were collected as part of the comprehensive Higher Education General Information Survey, conducted by the Higher Education Surveys Branch of the National Center for Educational Statistics. Schedule VIII of this survey was used to obtain data summarized in this publication. The forms were mailed in April 1968 to provide individual institutions with sufficient lead time to develop collection and reporting procedures. The report form itself requested enrollment data for the fall 1968 school term. The original deadline of November 15, 1968, was extended to allow maximum response. Prior to the final cutoff in the spring of 1969, letters and telephone calls were utilized to achieve an ultimate response rate of 98 percent.

Each institution was asked to report, according to its own definitions, the State of home residence and the enrollment level and attendance status for each student in a resident program leading to a bachelor's or higher degree. Summary data only, not included in this report, were requested for extension students and all students in occupational programs not leading to the bachelor's degree. Excluded from the survey (as is usual for USOE higher education enrollment surveys) were students enrolled as auditors or in noncredit adult education courses, short courses, and correspondence courses. Also excluded were U.S. students studying in foreign countries, whether they were enrolled or not in overseas branches of U.S. institutions.

Inasmuch as residence and migration studies have recently been made only at 5-year intervals, it is worthwhile to note the major differences in the definitional parameters of the data for this report and the comparable reports for the two most recent previous surveys—1963 and 1958, as follows:

	1958	*1963*	*1968*
Service Schools	Included in State in which located	Tabulated separately	Tabulated separately
Home address	In general, State where resided prior to first enrollment	State of permanent address	State of legal residence as defined by reporting institution
Hawaii	Included in Outlying Areas	Handled as a State	Handled as a State
Terminal-occupational students	Probably included	Excluded	Collected only in summary form—excluded from migration data
Extension students	Included	Excluded	Collected only in summary form—excluded from migration data
First-time undergraduates	Not enrolled since secondary school	No prior college credit	Not previously enrolled in an institution of higher education
New transfer students	Transferred from another collegiate institution	Some credit for previous college work	Transferred from another institution, with or without credit
Students in overseas branches of U.S. institutions	Not defined, probably included	Excluded students studying abroad [13]	Excluded students studying abroad and students enrolled in overseas branches of U.S. institutions
First-professional students	Included students in professional schools or programs requiring 5 or more years of college work.	Included students in professional schools or programs requiring 5 or more years of college work	Included students in professional schools or programs requiring 6 or more years of college work

[13] Since it was not clearly stated on the survey questionnaire, some institutions may have included students in their own overseas branches.

The relatively minor numerical impact of these changes is such that general statistical comparisons may be made among the three surveys.

Among the 2,495 institutions asked to provide residence and migration information, all but 50 responded. The respondents constituted 98.0 percent of the universe of eligible institutions and accounted for 98.2 percent of the estimated total student enrollment, in accordance with the survey of *Opening Fall Enrollment in Higher Education, Fall 1968*. An examination of the specific institutions that did not respond failed to show any noteworthy pattern of potential bias on the basis of geographical location, control of institution, or size.[14]

Data were imputed for the 50 nonresponding institutions using a variety of other resource materials. Institutional enrollment data, for example, were developed from the actual response to the *Opening Fall Enrollment* survey for 1968. Residence and migration patterns for these institutions were assumed to be the same as the ratios for their States in 1963. The net impact of this assumption, of course, would be to reduce slightly the extent of change from 1963.

Careful readers may note the discrepancy between the 6,983,093 students reported in *Opening Fall Enrollment in Higher Education: Fall 1968* and the 6,711,158 in this study. This difference, 271,935, consists primarily of extension students who were included in the opening fall enrollment study; the two counts may also differ, to a lesser degree, because of an excess of dropouts over late enrollments reflected in the later migration survey.

In preparing the 1968 report, deliberate steps were taken to reduce it in size and complexity. In contrast to 66 tables in 1963, the 1968 report includes only 40. On the basis of reader response to 1963 materials, it was decided to eliminate a whole series of tables that summarized regional data. Regional analysis, or any other combination of the data, may be made from the State data provided. Several composite tables, combining data for first-professional and graduate students, were eliminated. Also excised was a series of long tables showing the five States that provided the most inmigrants for each State and the five States that enrolled the most outmigrants. The user can derive data of this type from the basic State-to-State data contained in the aforementioned companion publication.

Added to the 1968 report, however, were two new sets of tables. One deals with residence and migration of graduate students by control and level of institution (tables 26, 27, and 28), and the other presents information on students enrolled, student residents, and students remaining in their home States to attend college, by enrollment status, sex, and control of institution (tables 32, 33, and 34).

For the benefit of persons who seek to compare, in detail, the 1963 and 1968 reports, the conversion table in appendix B (which gives the numbers of comparable tables) may be of value.

---

[14] A list of these 50 institutions can be found in appendix B of the recently published report, *Residence and Migration of College Students, Fall 1968: Basic State-to-State Matrix Tables.*

130

MIGRATION TABLES AND MAPS

NOTE

Interspersed among the 40 tables in this report are 18 figures (maps) to present visually the geographical relationships among the various States with high (or low) ratios of student migrants (in or out).

The 18 figures consist of six student-institution combinations with a series of three figures in each group. Each three-figure series is based on one of the tables in the report. The first figure in each series presents the net number of inmigrants or outmigrants for each State. The second figure shows for each State the ratio of students remaining in their home State to all students enrolled in that State, and the third figure shows the ratio of students remaining to all student residents of that State.

On each map the States are shaded according to the number (or proportion) of inmigrants or outmigrants. The number of States in a particular size-class is shown in parentheses at the left of the shade-key for each size-class. The range of net migration is shown on the first figure in each three-figure series. On the second and third figure in each series—those presenting the migration ratios—the national average, the median State ratio, and the range of State ratios are shown.

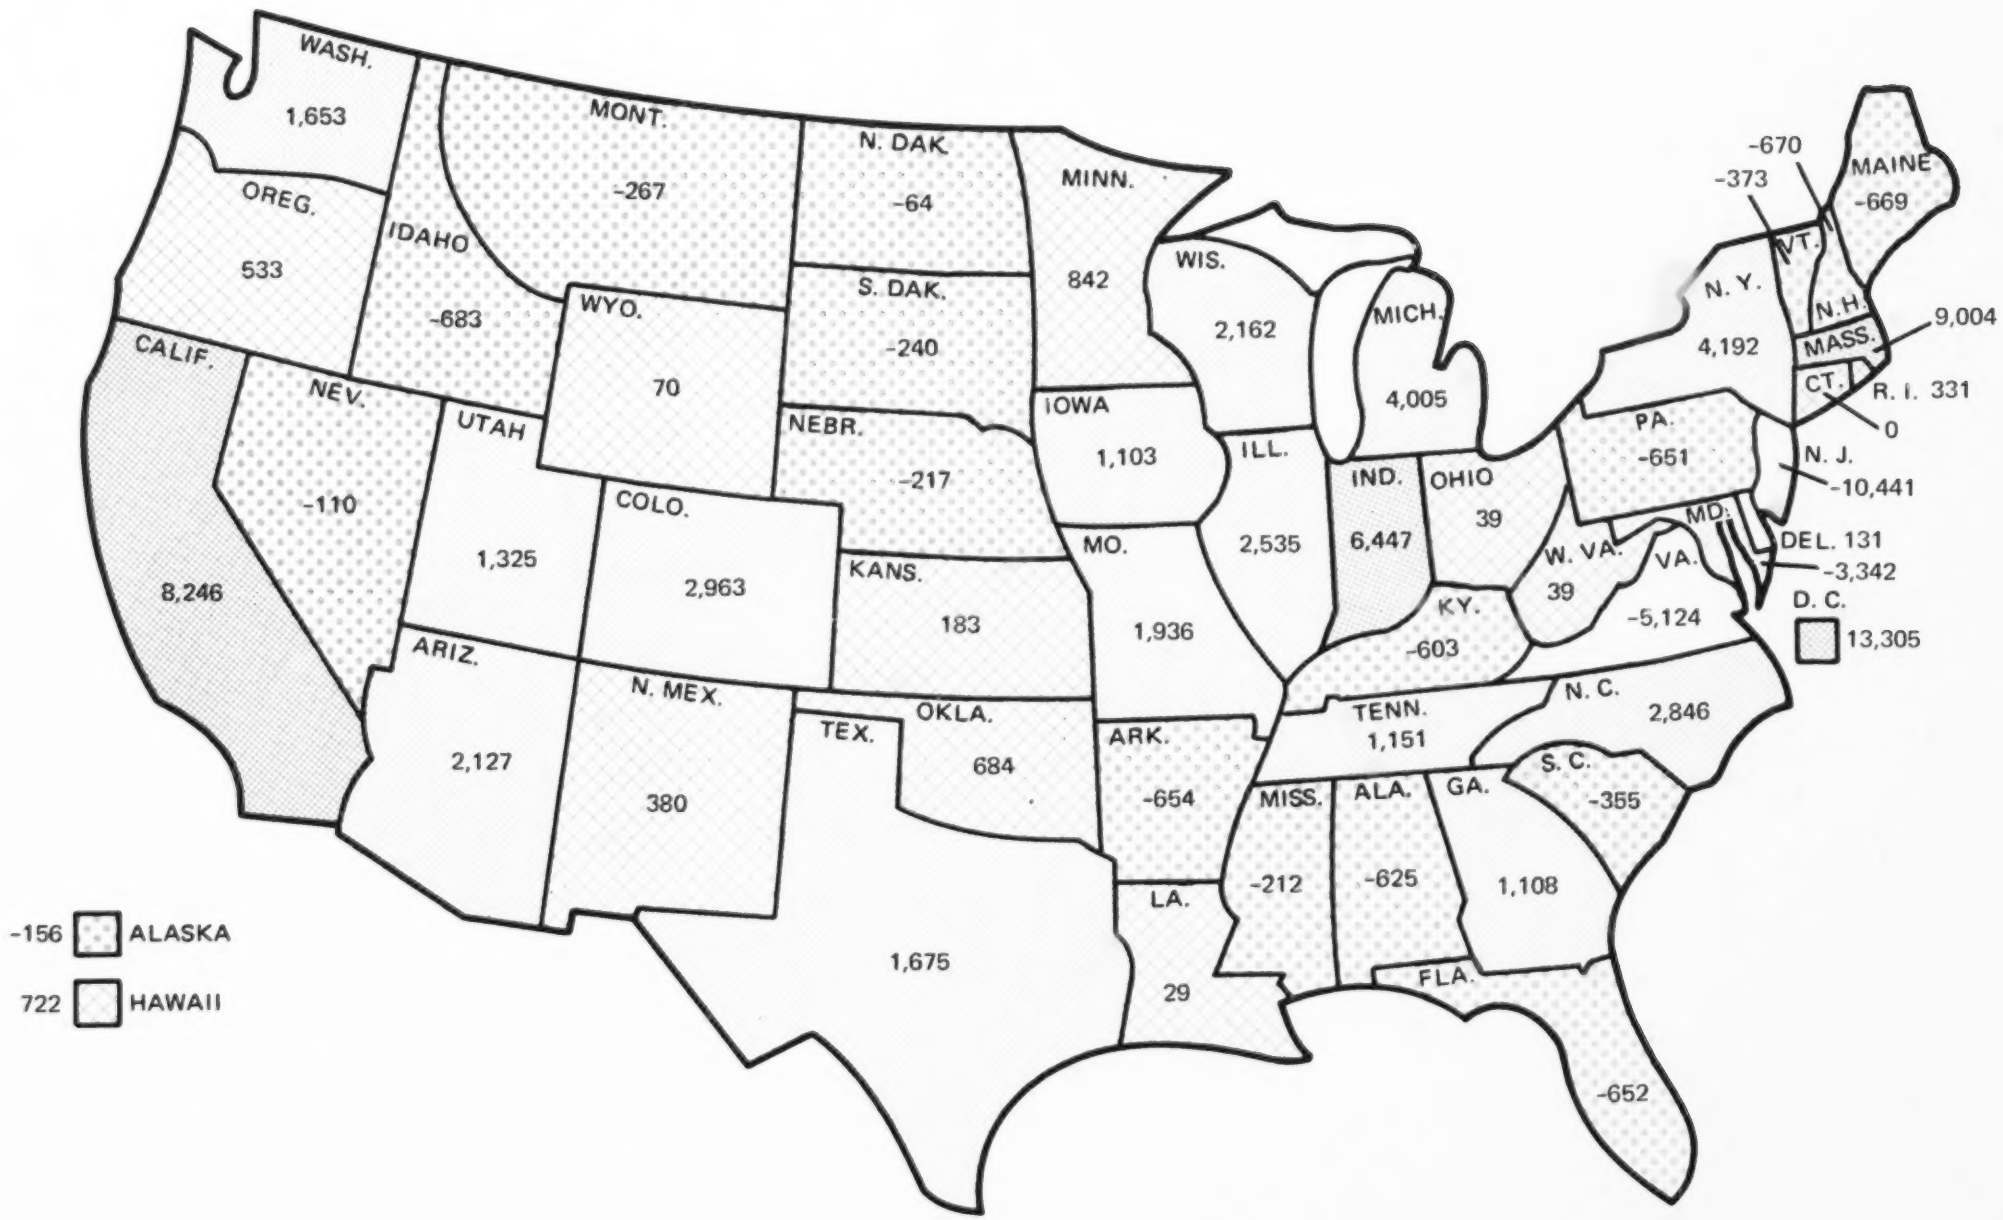
FIGURE 6A

RESIDENCE AND MIGRATION OF GRADUATE STUDENTS: ALL INSTITUTIONS, FALL 1968



Net inmigration
(Range 0 to 13,305)

(4) 5,000 or more

(14) 1,000 to 4,999

(13) Less than 1,000

Net outmigration
(Range -64 to -10,441)

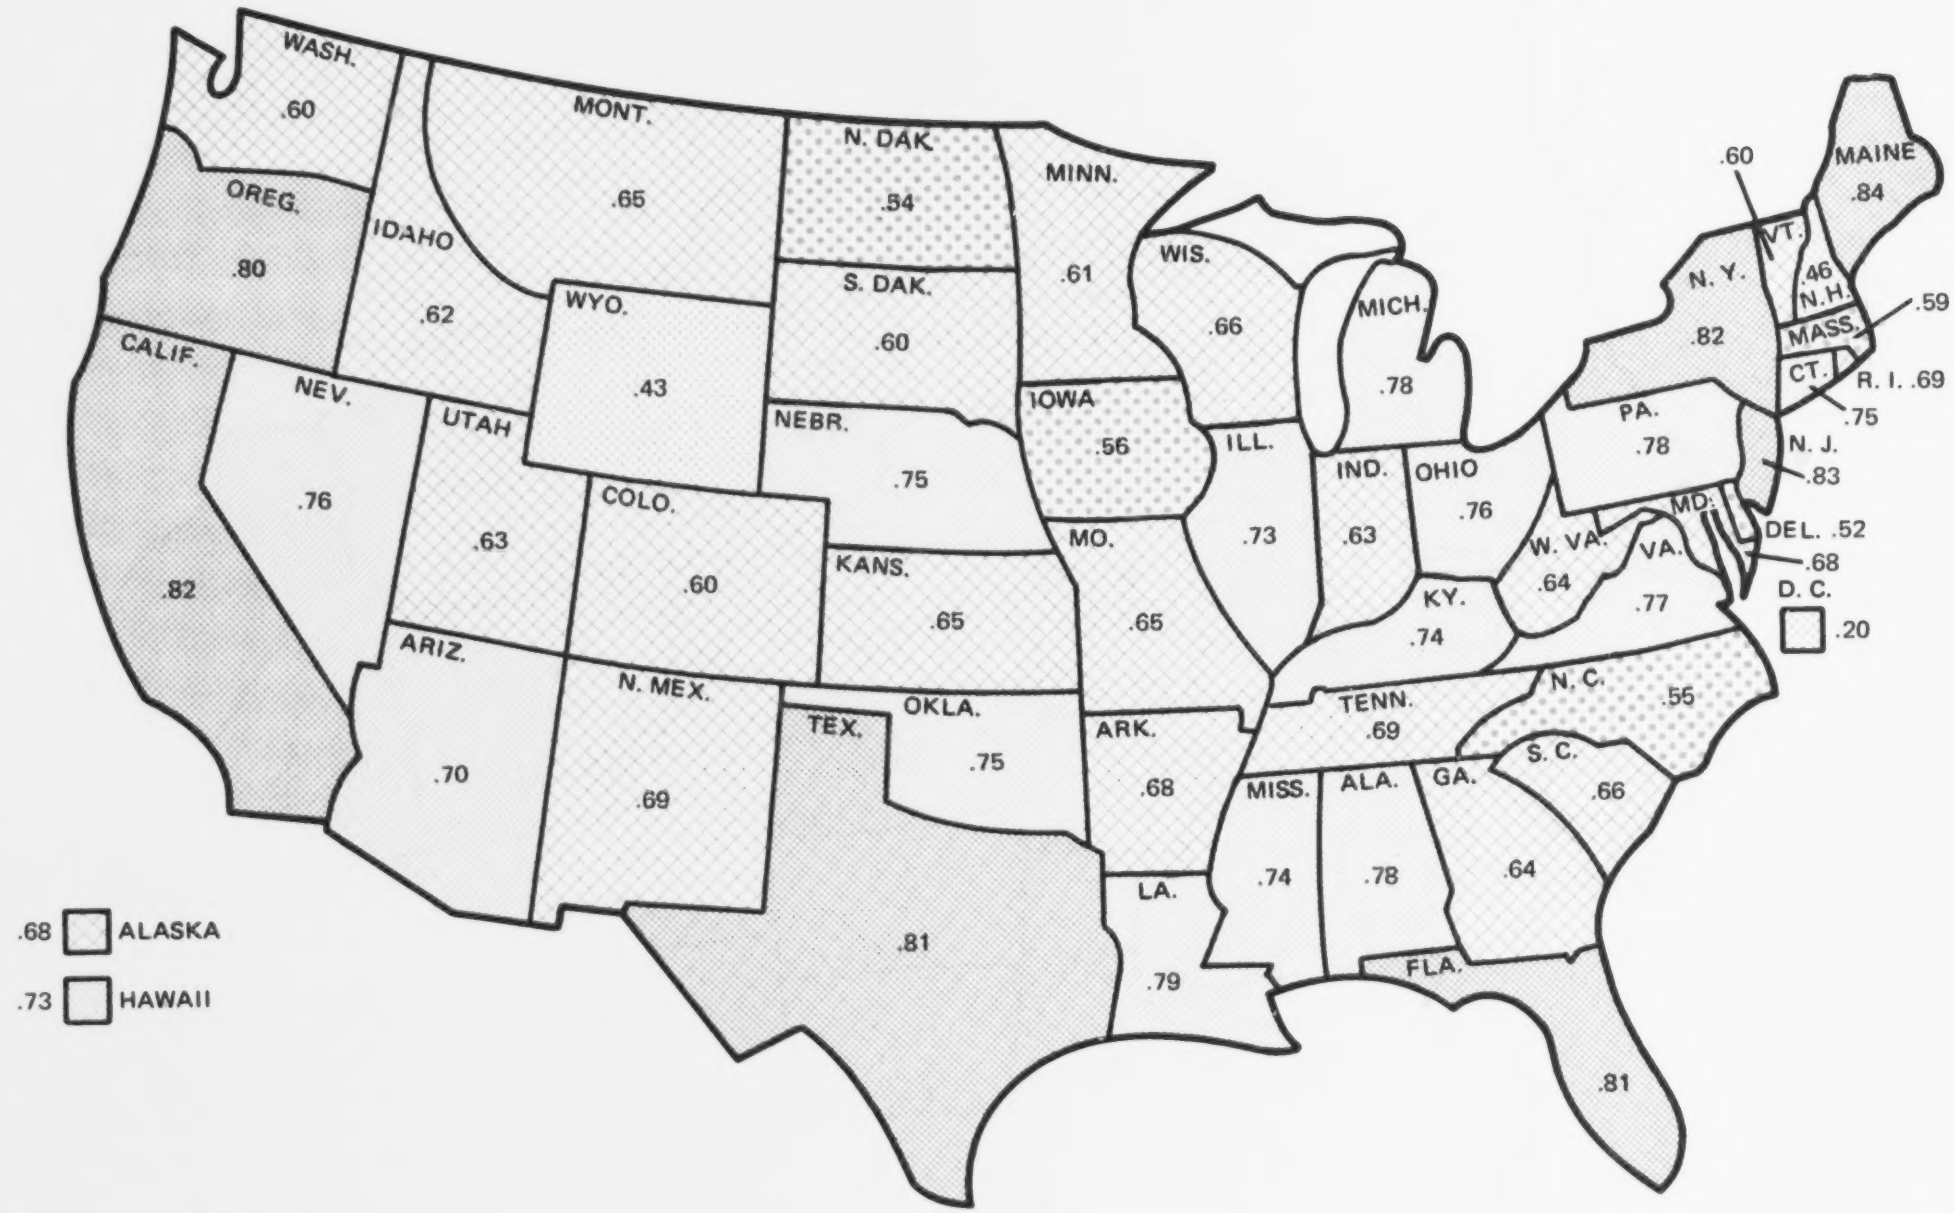
(17) Less than -1,000

(1) -1,000 to -4,999

(2) -5,000 or more

FIGURE 6B

RATIO OF GRADUATE STUDENT RESIDENTS REMAINING IN THEIR HOME STATE TO ATTEND COLLEGE TO TOTAL GRADUATE STUDENT ENROLLMENT IN THE STATE: ALL INSTITUTIONS, FALL 1968



(National average, .73; median State ratio, .68; range of State ratios, .20 to .84)

(7) .80 to .89

(15) .70 to .79

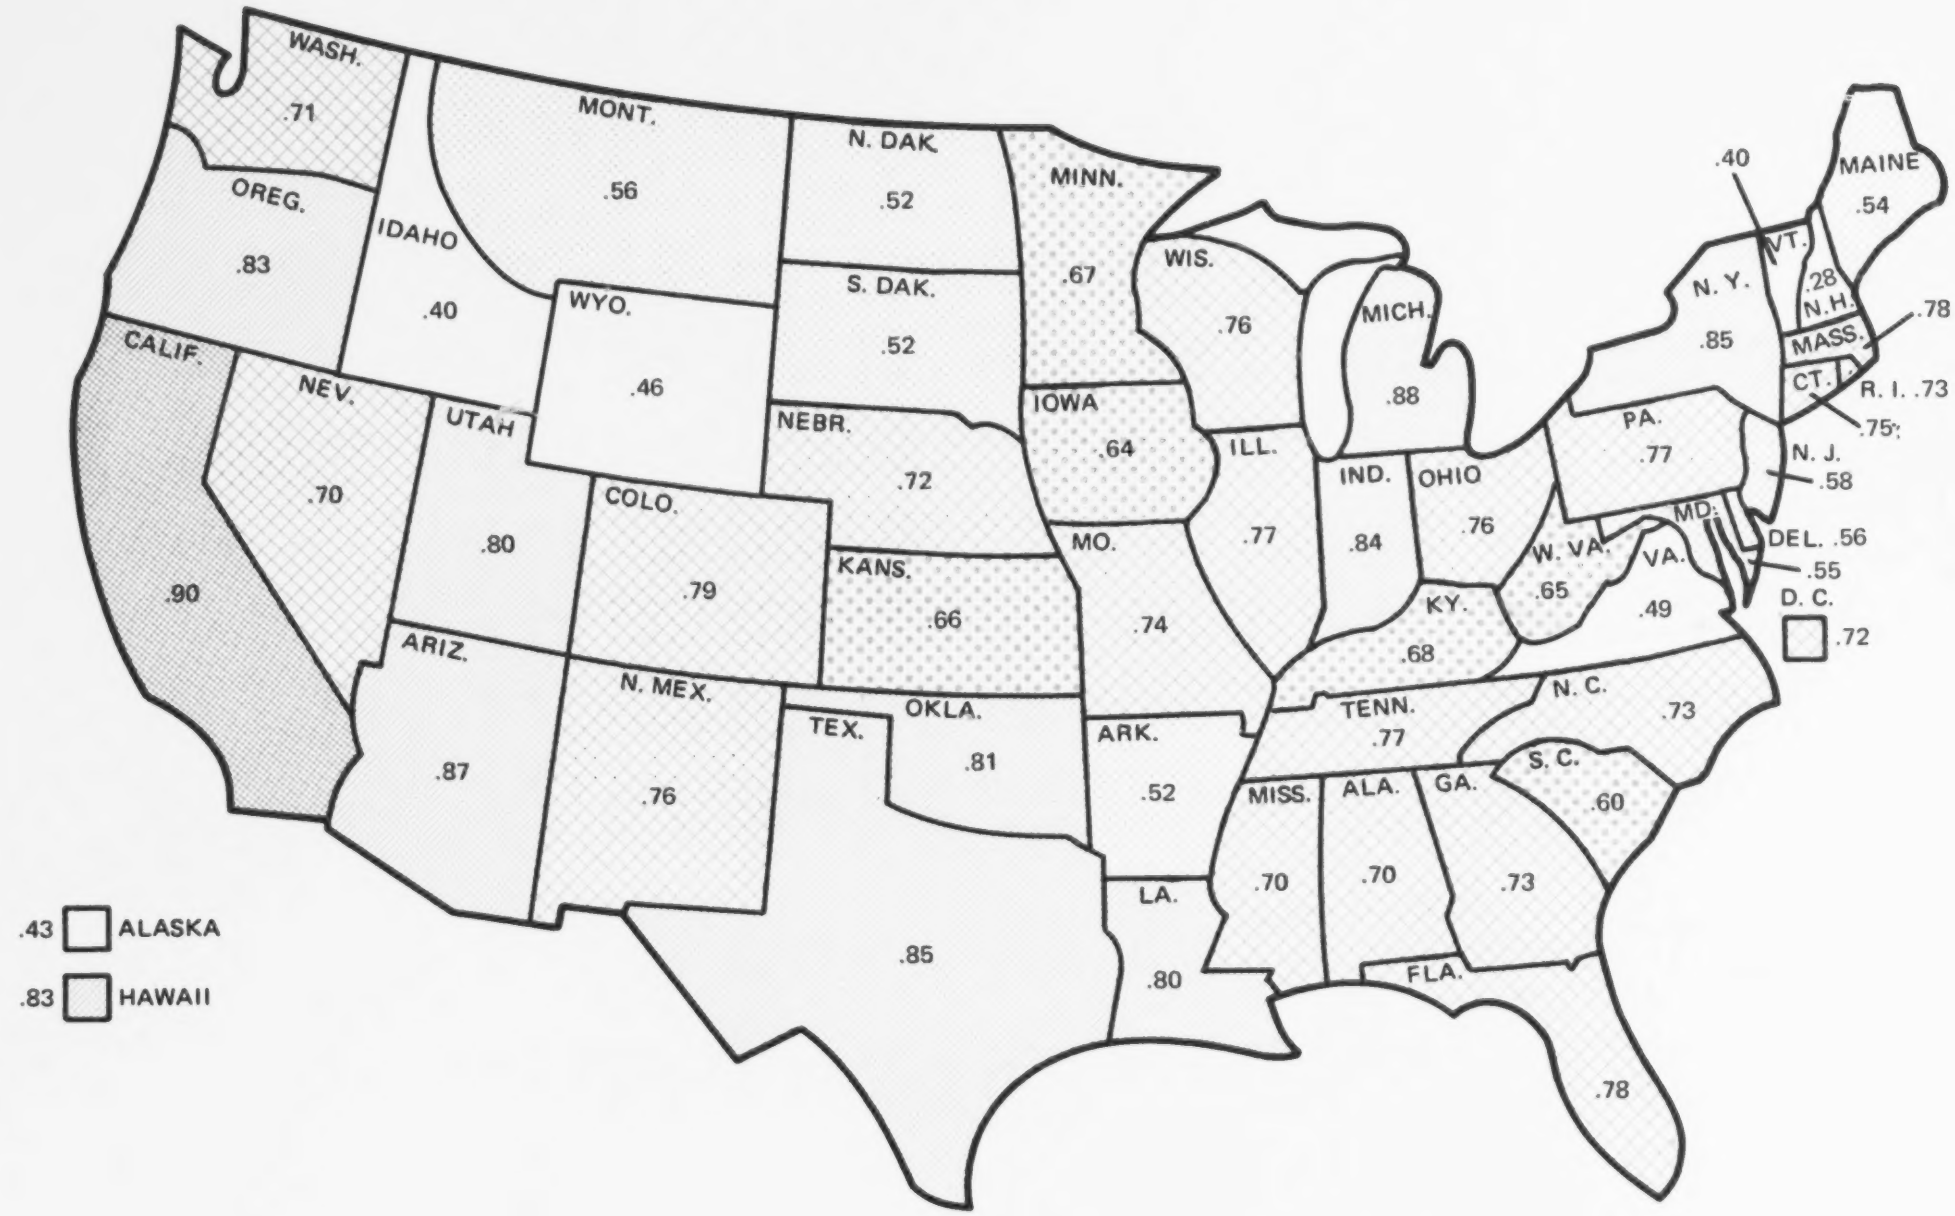
(21) .60 to .69

(5) .50 to .59

(3) Less than .50

FIGURE 6C

RATIO OF GRADUATE STUDENT RESIDENTS REMAINING IN THEIR HOME STATE TO ATTEND COLLEGE TO TOTAL GRADUATE STUDENT RESIDENTS OF THE STATE: ALL INSTITUTIONS, FALL 1968



(National average, .77; median State ratio, .72; range of State ratios, .28 to .90)

(1)	.90 or more	(6)	.60 to .69
(10)	.80 to .89	(8)	.50 to .59
(20)	.70 to .79	(6)	Less than .50

HIGHER EDUCATION GENERAL INFORMATION SURVEY
SCHEDULE VIII - RESIDENCE AND MIGRATION OF COLLEGE STUDENTS: FALL 1968

PLEASE READ INSTRUCTIONS BEFORE COMPLETING THIS FORM

IF YOU HAVE NO BRANCHES CHECK HERE ☐

THIS REPORT INCLUDES THE FOLLOWING BRANCHES

THIS REPORT EXCLUDES THE FOLLOWING BRANCHES

BUDGET BUREAU NO: 51-S67018
APPROVAL EXPIRES: 6/30/69

INSTITUTION CODE NUMBER

REPORTING DATE
November 15, 1968

CORPORATE NAME AND MAILING ADDRESS OF INSTITUTION

IF BRANCH CAMPUS, NAME OF PARENT INSTITUTION

NAME AND TITLE OF RESPONDENT

TELEPHONE INFORMATION *(Area Code, Local No., and Extension)*

PART I - HOME STATES OF STUDENTS ENROLLED AT MAIN AND BRANCH CAMPUSES IN PROGRAMS WHICH ARE WHOLLY OR PRINCIPALLY CREDITABLE TOWARD BACHELOR'S OR HIGHER DEGREES: FALL 1968

GENERAL INSTRUCTIONS FOR PART I. Exclude: (a) Extension students. Information on these students is requested in Part II. (b) Students in work not chiefly creditable toward a bachelor's or higher degree. Information on these students is requested in Part III. (c) Students enrolled in adult education. (d) Students taking courses at home by mail, radio, or TV. (e) Students enrolled for "short courses." (f) Auditors. (g) Students studying abroad. (h) Students in branches in foreign countries.

Include: Full-time and part-time students enrolled at main or branch campuses within the U.S. in programs which are wholly or principally creditable toward bachelor's or higher degrees. This specification includes special and unclassified students, students from foreign countries, and students taking courses in the late afternoon, evening, as well as "regular" students.

If you need additional clarification on any of the items, please call Dr. Marjorie Chandler, 202-962-7301.

COLUMN 1 - HOME STATE: State of the student's legal residence as determined at the institution.

COLUMNS 2 THROUGH 11: UNDERGRADUATE STUDENTS. Include full-time and part-time undergraduates who have not completed a full 4-year program or its equivalent, and also those in 5-year bachelor's degree programs. (Students in cooperative programs are to be included here.) Students reported in Columns 8 through 11 (First-Time Students and New Transfers) should also be included in Columns 2 through 7. Include students whose work is wholly or principally creditable toward a bachelor's degree either in your institution or by transfer (as from a 2-year college to a 4-year institution).

COLUMNS 12 and 13: FIRST PROFESSIONAL STUDENTS. Include students enrolled in a professional school or program which requires at least two or more academic years of previous college work for entrance and which requires a total of at least six academic years of college work for a degree (law, medicine, etc.).

All students in programs which require only four or five academic years of college work for the degree should be reported as undergraduate (cols. 2 through 11). All students enrolled in work leading to a master's degree are to be reported as graduate (cols. 14 and 15).

COLUMNS 14 and 15: GRADUATE STUDENTS. Include graduate students in liberal arts and sciences and students beyond the first professional degree. Do not include students studying for the M.D., D.D.S., LL.B., B.D., or other first professional degrees. (See cols. 12 and 13.)

HOME STATE	UNDERGRADUATE STUDENTS										FIRST PROFESSIONAL STUDENTS *(With preprofessional training; see Instructions above)*		GRADUATE STUDENTS *(See Instructions above)*		GRAND TOTALS *(Sum of cols 6, 12, and 14 for Men, and 7, 13, and 15 for Women)*		
	FULL-TIME STUDENTS *(Taking at least 75% of normal load)*		PART-TIME STUDENTS *(Taking less than 75% of normal load)*		TOTAL *(Sum of cols 2 and 4 for Men and 3 and 5 for Women)*		FIRST-TIME STUDENTS *(Beginning freshmen not previously enrolled in your institution or in any institution of higher education)*		NEW TRANSFER STUDENTS *(Transferred this fall from other institutions with or without credit)*

PART II. SUMMARY DATA ON EXTENSION STUDENTS. Include in this part students taking work in extension, not included in the migration table above. Exclude students enrolled in foreign extension centers. Please supply the enrollments without regard to State of residence.

STUDENTS TAKING WORK IN EXTENSION CLASSES *(Excluding courses by mail, radio, or TV)*	MEN	WOMEN
A. Students taking work creditable toward bachelor's or higher degrees		
B. Students in occupational programs not chiefly creditable toward a bachelor's degree *(Excluding adult education enrollments)*		

PART III. SUMMARY DATA ON STUDENTS ENROLLED IN OCCUPATIONAL PROGRAMS NOT CHIEFLY CREDITABLE TOWARD A BACHELOR'S DEGREE. Include in this part students taking work in an undergraduate program of less than 4 years which prepares for immediate employment. Such programs usually lead to a one, two, or three year certificate, diploma, or associate degree, but are not chiefly creditable toward a bachelor's degree. Students in programs which prepare for occupational competence and are also chiefly creditable toward a bachelor's degree should be reported as bachelor's degree credit students in Part I, and should not be included in Part III.

STUDENTS IN OCCUPATIONAL PROGRAMS NOT CHIEFLY CREDITABLE TOWARD A BACHELOR'S DEGREE	MEN	WOMEN
A. Full-Time Students		
B. Part-Time Students
